Why are we here

- Crossing technologies
 - Networks are becoming increasingly complex... and interdependent
 - All disciplines are increasingly being used in a distributed, connected world
- Can we know ourselves better?
- Can we understand what we can provide to each other?
- Can we understand what we expect and rely from each other?

Our overall quest

- NW2020 drives a SRIA
 - Our strategic research and innovation agenda is updated every two years
- Can we incorporate/design/plan collaborative/synergistic research plans for the future?
- How, and what, can we (provide to/rely on) different disciplines to develop a better digital Europa?

Our outcomes today

- Provide a report of key messages of mutual understanding/synergies/dependences to the different communities
- Realize how much other disciplines will impact future network developments
- Panel discussions are essential!
 - How distributed is the world view each of us have?
 - How much does that affect our disciplines?
 - What do we expect "somebody else" to take care of?
- We will follow this by a much larger exercise later in October.

Thank you for coming and...

Enjoy the discussions today!
